According to our (Global Info Research) latest study, the global Feed Additive D-Biotin market size was valued at US\$ 57.8 million in 2024 and is forecast to a readjusted size of USD 77.9 million by 2031 with a CAGR of 4.4% during review period.

A white or almost white ,crystalline powder or colourless crystal, very slightly soluble in water and in alcohol,practically insoluble in acetone. It dissolves in dilute solutions of alkali hydroxides,used as accessory substance, food and feed additive. Since about 80% of biotin is used in feed additives, its prosperity mainly depends on the development of the feed additive industry.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production. With the rapid development of the livestock industry, feed additives play a crucial role in enhancing animal production performance and health. Among these additives, D-Biotin stands out as a vital nutrient widely used in animal feed formulations. D-Biotin, belonging to the B-vitamin complex, exerts a positive impact on the health of animals' skin, feathers, hooves, and fur. Moreover, it contributes to the metabolism of proteins, fats, and carbohydrates, thereby aiding in improving growth rates and overall production performance of animals. As the demand for high-quality animal products continues to rise, the feed additive market demonstrates a steady growth trajectory. Consequently, D-Biotin, as a premium feed additive, holds promising market prospects.
