Abstracts

Feed Flavor Additives are non-nutritive additives. Mainly include sweeteners, umami agents and spicy agents. Sweeteners are mainly generated from hydroxyl-containing aliphatic compounds, and their main function is to enhance the sweetness of feed, mask the unpleasant taste of some animals in the feed, and increase animal feed intake. Commonly used sweeteners are sodium saccharin, potassium acesulfame, sodium cyclamate, and sucralose. The umami agent is a feed additive that improves the flavor of the feed. The most widely used one is sodium glutamate, which is mainly used in piglet feed. Spicy agent is a special additive added to the feed to give the feed a spicy taste. It is mainly used in the feed of animals that have a certain preference for spicy taste, such as pigs, chickens, and cattle. The commonly used feed spicy agents are mainly garlic powder and red. paprika.
