Abstracts

The global Feed Flavor and Sweetener market size is expected to reach \$ 1115 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Feed flavors and sweeteners are additives used in animal feed to enhance its aroma and taste characteristics. By improving palatability and sensory appeal, these ingredients help increase feed intake, support animal growth, and improve feed conversion efficiency, while potentially reducing feed waste and production costs. Flavors primarily provide aromatic stimulation, while sweeteners enhance perceived sweetness; together they work to improve overall feed acceptability for animals. In 2025, global feed flavors and sweeteners sales reached approximately 6,000 tons, with an average price of 130 US\$/Kg.

The growth of the feed flavors and sweeteners market is driven by the expansion and consolidation of the livestock industry, as larger and more intensive farms create higher demand for highly palatable and efficient feed. At the same time, rising consumer expectations for the quality of meat and other animal products encourage producers to optimize feed formulations to enhance animal intake and production performance. Fluctuations in feed raw material prices and the increased use of non-grain ingredients make flavors and sweeteners increasingly important in improving feed intake, reducing waste, and boosting efficiency. The varying sensory preferences of different animal species further drive product differentiation and innovation to meet diverse livestock needs.
