The global Feed Grade Canthaxanthin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Canthaxanthin is a carotenoid pigment. Deep purple crystal or crystalline powder. The melting point is about 210°C (decomposition). Oxygen and light instability. It should be stored in a light-shielding container filled with inert gas. Soluble in chloroform (10%), slightly soluble in vegetable oil (0.005%), acetone (0.03%). Insoluble in water, ethanol, propylene glycol. The stable commercial product is in the form of a solution in fat or organic solvent, or in the form of a water-dispersible orange to red powder or granules. After coloring, the color tone is not affected by the pH value, it is also quite stable to sunlight, and it is not easy to fade.
