Abstracts

The global Feed Grade Copper Sulfate Pentahydrate market size is expected to reach \$ 396 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

Feed Grade Copper Sulfate Pentahydrate is a blue crystalline or powdery inorganic compound, commonly known as blue vitriol or copper sulfate pentahydrate, and is a commonly used trace element copper additive in livestock farming. It is mainly used to supplement the copper needed for blood formation, bone development, and disease resistance in animals, promoting growth and coat quality in pigs and sheep. It is also used as a bactericide and algaecide in aquaculture.

The upstream industry mainly relies on non-ferrous metal mining and smelting, with electrolytic copper or various copper scrap as the core raw material. The production process involves chemical auxiliaries such as sulfuric acid and water treatment agents, and energy costs directly affect the price. The core technological barrier lies in the impurity removal process, which uses physical and chemical methods to reduce the residues of heavy metals such as arsenic, lead, and cadmium in upstream raw materials to below national standards, ensuring safety.

In 2025, global production of feed-grade copper sulfate reached 352,400 tons, with an average selling price of US\$840 per ton.

In the pig and poultry farming sector, copper's significant effects on promoting growth, improving coat shine, and sterilizing the digestive tract have created a rigid demand for it in feed. Furthermore, the maturity of secondary resource recycling technologies has injected new momentum into the industry, significantly reducing raw material

procurement costs. As animal science research delves deeper into the antagonistic effects of trace elements, copper sulfate pentahydrate is facing differentiated competition from organic chelated copper (such as copper methionine), forcing traditional manufacturers to upgrade their technologies towards high-bioavailability compound formulations.

This report studies the global Feed Grade Copper Sulfate Pentahydrate production, demand, key manufacturers, and key regions.
