Abstracts

The global Feed Grade Copper Sulfate market size is expected to reach \$ 578 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Feed grade copper sulfate is a mineral additive specifically used in animal feed. Its main component is copper sulfate pentahydrate, which has high purity and strict heavy metal impurity control standards. It is mainly used in feed formulations to supplement the copper element needed for animal growth, promote animal metabolism, improve immunity, and enhance growth performance. It is widely used in pig, poultry, ruminant, and aquaculture feed and is one of the important trace element additives commonly used in animal husbandry and aquaculture industries. In 2025, global Feed Grade Copper Sulfate production reached approximately 459.31 K MT, with an average global market price of around US\$ 854 per MT.

With the continuous development of large-scale animal husbandry and aquaculture industries worldwide, the demand for feed grade copper sulfate has maintained stable growth. However, the industry is also affected by environmental policies, animal nutrition safety, and standards for the use of trace elements. In some regions, the addition amount is restricted, which drives enterprises to upgrade to high-purity, low impurity, and high utilization products. At the same time, in the context of the development of alternative organic copper and high-efficiency trace element products, the overall market for feed grade copper sulfate shows a stable and orderly development trend.

This report studies the global Feed Grade Copper Sulfate production, demand, key manufacturers, and key regions.
