Abstracts

According to our (Global Info Research) latest study, the global Feed Grade Oils market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The feed grade oils are also available from the blends of the animal and vegetable oils. Previously, the feed grade oils were used mainly in the diets of the swine and poultry. However, now the feed grade oils are being used to add the energy content in form of starch in the diets of the ruminant. The feed grade oils minimize the bloat incidence and help in providing energy to the animals. When the cost of grains increases the feed grade oils are used as an alternative for increasing the energy content in the animal diet.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
