Abstracts

According to our (Global Info Research) latest study, the global Feed Palatants market size was valued at US\$ 5625 million in 2025 and is forecast to a readjusted size of US\$ 8180 million by 2032 with a CAGR of 5.6% during review period.

Feed palatants are functional additives used in animal nutrition to enhance feed palatability by improving taste, aroma, and mouthfeel, thereby increasing feed intake and supporting animal performance. These additives are widely used in pet food, livestock feed, aquaculture feed, and specialty nutrition products, and may include flavors, sweeteners, aroma compounds, and protein-based palatability enhancers such as digest hydrolysates. Feed palatants can be delivered in liquid or dry forms and are often formulated to target specific animal species and dietary preferences. From a value chain perspective, upstream includes raw materials such as proteins, fats, flavor compounds, fermentation products, and processing inputs; midstream involves formulation, blending, encapsulation, drying, and quality control; downstream demand comes from pet food manufacturers, livestock feed producers, aquaculture companies, and animal nutrition suppliers. In 2025, the average selling price is approximately US\$3,850 per ton, global sales volume is about 1.42 million tons, and industry gross margin generally ranges from 20% to 35%, supported by formulation know-how, species-specific customization, and value-added functionality.

The market is shifting from basic flavor enhancement toward functional palatability solutions. Feed palatants are increasingly designed not only to improve taste but also to support digestion, gut health, and nutrient utilization.

A major trend is the rapid growth of the pet food segment. Premium and super-premium pet food products are driving demand for high-quality, species-specific palatants with

strong aroma and flavor performance.

Another important direction is protein-based palatants. Hydrolyzed proteins and digest-based ingredients are gaining traction due to their strong palatability effects and compatibility with high-protein feed formulations.

Liquid palatants are also becoming more widely used, especially in coated kibble and extruded feed, due to their uniform application and strong sensory impact.

Future growth will be driven by pet humanization trends, precision animal nutrition, aquaculture feed development, and the increasing importance of feed efficiency.
