According to our (Global Info Research) latest study, the global Feed Premix market size was valued at USD 24180 million in 2023 and is forecast to a readjusted size of USD 32400 million by 2030 with a CAGR of 4.3% during review period.

Feed premix are a mix of certain complex compounds such as minerals, vitamins, and amino acids. Two or more number of these compounds should be present in the feed premix. These feed premix give animals a direct source of nutrients, and help give them proper nourishment. There are certain nutrient compounds such as macronutrients and micronutrients in feed premix.

Macronutrients are nutrients that are required in large quantities by the body, such as carbohydrates and fats. Micronutrients are certain nutrients that are required in small quantities by the body, such as vitamins, minerals, and amino acids. These micronutrients are mostly not found in animal feed. Hence, consumers have started feeding animals with feed premix that consist of all the micronutrients in large quantities. This helps the animals get proper nourishment. Feed premix are added to animal feed for their consumption.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons.
