A feeding nutrition bag is a medical device designed for the administration of liquid nutrition directly into a patient's digestive system. Typically composed of sterile and biocompatible materials, the bag is connected to a feeding tube and contains a nutrient-rich solution. This method, known as enteral nutrition, is crucial for individuals who cannot consume food orally. The bag facilitates controlled and measured delivery of essential nutrients, vitamins, and minerals, supporting patients with various medical conditions, such as those recovering from surgery, facing swallowing difficulties, or experiencing prolonged periods of malnutrition.
