Abstracts

Due to its new application development and increasing use in photovoltaic devices, the demand for polymers in many end-use industries is increasing, which is the main driving factor for the development of high-performance fluoropolymer industries. PTFE has excellent chemical and heat resistance, extremely low coefficient of friction and high electrical insulation. It is widely used in applications such as semiconductors, automotive parts, appliances and non-stick frying pans. In addition, compared to other types of HPF, the cost of PTFE is also lower, which has led to an increase in demand. FEP can be melt processed for the production of FEP pipes, a process similar to PTFE. However, FEP has some other characteristics, such as excellent transparency and its ability to form long, continuous coils. These factors are expected to jointly drive growth in the sector over the forecast period.

According to our (Global Info Research) latest study, the global FEP High Performance Fluoropolymer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
