## Abstracts

FEP Monofilament is a monofilament made from fluorinated ethylene propylene copolymer (FEP). FEP is a melt-processable modified polytetrafluoroethylene (PTFE) material produced through the copolymerization of tetrafluoroethylene and hexafluoropropylene. FEP monofilament inherits the excellent properties of PTFE, such as excellent chemical resistance, high temperature resistance and electrical insulation, while also overcoming the shortcomings of PTFE's high melt viscosity and difficulty in spinning. FEP monofilament has a low friction coefficient and good lubricity, with a smooth surface and a translucent appearance. In addition, it has good temperature resistance and can maintain stable performance in high temperature environments. These characteristics make FEP monofilament have wide application value in many fields.

According to our (Global Info Research) latest study, the global FEP Monofilament market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
