Abstracts

Foam is a substance that is formed by trapping pockets of gas in a liquid or solid. A bath sponge and the head on a glass of beer are examples of foams. Antifoams are an effective remedy.

Fermentation defoamer refers to the specific defoamer used in fermentation production process defoaming.

Scope of the Report:

This report focuses on the Fermentation Defoamer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The food & beverage application dominated the fermentation defoamer market during the forecast period, closely followed by pharmaceutical in 2016. Feed application is also expected to witness high growth rate between 2017 and 2023 in Asia-Pacific, as a result increasing the demand for fermentation defoamer in the respective regions.

The fermentation defoamer market is classified based on type: Silicone Defoamer, Polyether Defoamer and Polyether Modified Silicon Defoamer. The market is dominated by silicone-based due to their enhanced properties such as low surface tension, chemical inertness, thermal stability, and complete insolubility in water. The silicone-based segment is also projected to be the fastest-growing type of fermentation defoamer during the forecast period.

Currently, Asia-Pacific region is the largest consumption market, in terms of value, closely followed by Europe. Some of the factors driving the growth of the Asia-Pacific market are high growth of end-use industries, local manufacturing, and increased number of domestic players in various market segments.

The worldwide market for Fermentation Defoamer is expected to grow at a CAGR of roughly 1.7% over the next five years, will reach 310 million US\$ in 2023, from 280 million US\$ in 2017, according to a new GIR (Global Info Research) study.
