## Abstracts

The global Fermented Plant Milk market size is expected to reach \$ 5770 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global fermented plant milk production reached approximately 469,603 ton, with an average global market price of around USD 6,500 per ton. A factory gross profit of USD 1,820 per ton with 28% gross margin. A single line full machine capacity production is around 8,000 ton per line per year. downstream demand is concentrated in retail, foodservice and health product. A healthcare provider incorporates fermented soy-based yogurt drink into nutrition plans for patients with digestive sensitivity. Fermented plant milk is a dairy-free, plant-derived beverage produced by fermenting plant-based materials (such as soy, nuts, or coconut) with microorganisms, typically lactic acid bacteria (LAB). This process increases acidity (lower pH), enhances texture, improves nutritional value, and provides a characteristic tangy flavor while extending shelf life.
