The global Fermenters and Bioreactors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fermenters and bioreactors are equipment used in the fields of biotechnology and biopharmaceuticals to cultivate and control microorganisms, cell culture and other biological processes. Fermenters are equipment used to culture and manage microorganisms (such as bacteria, fungi, yeast, etc.), providing an optimized environment to support the growth and metabolic activities of microorganisms. Bioreactors are a broader device that can be used to cultivate and control cell culture and other biological processes, including animal cells, plant cells, fungi, yeast, algae, etc. Bioreactor designs can be tailored to specific application needs, such as biopharmaceutical production, cell culture, biofuel production, biodegradation, environmental monitoring, etc.
