Abstracts

According to our (Global Info Research) latest study, the global Ferrite Core Inductor market size was valued at USD 829.2 million in 2023 and is forecast to a readjusted size of USD 1233.6 million by 2030 with a CAGR of 5.8% during review period.

It is the fixed value inductors which have a ferrite core placed inside the coil are known as a ferrite core inductor. The air core inductors and iron core inductors have a low inductance value, limited frequency operation and more losses. By using ferrite core instead of iron core these problem can be overcome.

Mixing Iron oxide (Fe2O3) in combination with other metal oxides like (Mn), zinc(Zn) or magnesium(Mg) at a temperature of 1000° C - 1300° C will result in a material with very interesting magnetic properties called ferrite.

Ferrite core inductors have high permeability, high electrical resistivity and low eddy current losses these characteristics make them suitable for many high-frequency applications.

For the major players of ferrite core inductor, the Murata maintained its first place in the ranking in 2019, followed by TDK, Taiyo Yuden. The Top 3 players accounted for about 40% market share of the ferrite core inductor.
