Abstracts

The global Ferrite Cores market size is expected to reach \$ 2600 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Ferrite cores is a type of magnetic core made of soft ferrite. Ferrite core is a magnetic material used in electronic and electrical equipment and is usually made of soft magnetic ferrite material. It has excellent magnetic permeability and low hysteresis loss and is widely used in inductors, transformers, power supplies, filters and other circuits. Ferrite cores have low hysteresis loss and can maintain stable magnetic properties under alternating magnetic fields, making them suitable for high-frequency applications. At the same time, it has excellent magnetic permeability and can effectively concentrate the magnetic field and increase the induced voltage.

Global key players of Ferrite Cores include TDK, DMEGC, TDG, FERROXCUBE, Acme Electronics, etc. The top five players hold a share about 36%. China is the largest market for Ferrite Cores and has a share about 48%, followed by Asia (excluding China) and North America, with share 20% and 15%, separately. In terms of product type, Manganese-Zinc Ferrite Core is the largest segment, occupied for a share of 72%. In terms of application, Communication is the largest application, occupied for a share of 30%.
