According to our (Global Info Research) latest study, the global Ferrite Plastic Magnets market size was valued at US\$ 5846 million in 2025 and is forecast to a readjusted size of US\$ 7426 million by 2032 with a CAGR of 3.5% during review period.

Ferrite Plastic Magnets are composite magnets that consist of ferrite magnetic powder (a type of ceramic - like magnetic material made mainly from iron oxide and other metal oxides such as strontium or barium oxides) dispersed in a plastic binder. The plastic binder serves to hold the ferrite particles together and can be molded into various shapes. This combination results in a magnet that has the magnetic properties of ferrite and the flexibility and ease - of - shaping characteristics of plastic.
