A ferrite ring magnet is a type of permanent magnetic material shaped like a ring. It has the form of a hollow cylinder with a circular hole in the middle. This shape gives rise to unique characteristics in its magnetic field distribution, where the magnetic flux lines form closed loops within the toroidal structure. A ferrite arc magnet, on the other hand, is a ferrite permanent magnetic material with an arcuate shape, which can be viewed as a segment of a circular magnet. Its curvature can vary according to specific application requirements, and the cross-sectional shape is typically rectangular or circular.
