According to our (Global Info Research) latest study, the global Ferritic Stainless Steel Strip market size was valued at USD 1203.9 million in 2022 and is forecast to a readjusted size of USD 1802.2 million by 2029 with a CAGR of 5.9% during review period.

Ferritic stainless steel strip is a type of metal product that is made of ferritic stainless steel, which is a category of stainless steel alloy. Ferritic stainless steel is characterized by its high chromium content, typically ranging from 10.5% to 30%, which gives it remarkable resistance to corrosion in oxidizing environments. Unlike austenitic stainless steel, ferritic stainless steel is magnetic due to its crystalline microstructure. It generally contains low carbon content and lacks the nickel that characterizes austenitic grades. This renders it less ductile and less prone to work hardening, limiting its formability. Despite this, ferritic stainless steel offers advantages such as excellent corrosion resistance, good thermal conductivity, and relatively low thermal expansion. It finds applications in various industries, such as automotive, appliances, architecture, and industrial equipment

Ferritic stainless steel strip has the characteristics of low cost, stable price, good corrosion resistance and oxidation resistance, excellent magnetism and thermal conductivity, etc. It can replace austenitic stainless steel in many fields, such as automobile industry, household appliance industry, construction industry, industrial equipment, etc.
