According to our (Global Info Research) latest study, the global Ferro Silicon 72 market size was valued at US\$ 396 million in 2024 and is forecast to a readjusted size of USD 488 million by 2031 with a CAGR of 3.2% during review period.

72 Ferrosilicon (FeSi72) is an iron-based alloy with a silicon content between 72% and 80%. It is mainly composed of silicon and iron, with high silicon content and good reducibility. It is widely used in steel smelting, casting and other fields. The production methods of 72 Ferrosilicon mainly include traditional smelting methods and new smelting methods. The traditional method uses silica, steel scraps and carbonaceous reducing agents (such as metallurgical coke, gas coke, semi-coke, etc.) to melt in a mining and smelting electric furnace. The new method reduces costs and improves product quality by optimizing the raw material ratio and smelting process.
