According to our (Global Info Research) latest study, the global Ferromolybdenum market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ferromolybdenum is a ferroalloy that is generally produced by the aluminothermic reduction of ferrosilicon and technical grade molybdic oxide. After the solidification of the metal, some milling and sieving operations are carried out, thus obtaining the suitable particle size for addition in steel and cast iron. Ferromolybdenum is classified according to its molybdenum content. The most common categories are those of FeMo between 60%-70%.
