The global Ferroresonant Charger market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ferromagnetic resonance charger is a wireless charging technology that uses the principle of ferromagnetic resonance to realize wireless charging of devices. The charger is composed of a transmitter and a receiver. The transmitter generates a magnetic field of a specific frequency, and the receiver has a built-in matching ferromagnetic resonance circuit. The device charges by frequency-matching the transmitter and absorbing energy from the transmitter's magnetic field without direct contact. The advantage of ferromagnetic resonance chargers is that they can achieve high-efficiency energy transmission over large distances, so they have broad application prospects in mobile devices, smartphones, and electric vehicles.
