Abstracts

The global Ferrotungsten Alloy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ferrotungsten is a master alloy for the production of tungsten-containing steels. The raw materials for ferrotungsten production are rich ore or ore concentrates of wolframite or scheelite. Also artificial scheelite or soft scrap can be used. The tungsten trioxide in these compounds can be reduced either carbothermically in electric arc furnaces or metallothermically by silicon and/or aluminum. Also a mixed carbothermic-silicothermic production is in use. Commercial ferrotungsten contains between 75 and 85% W. It has a steel grey appearance and a fine-grained structure consisting of FeW and Fe₂W. It is supplied in 80–100 mm lumps.

This report studies the global Ferrotungsten Alloy production, demand, key manufacturers, and key regions.
