Abstracts

The global Ferrous Aspartate market size is expected to reach \$ 91.08 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of ferrous aspartate reached approximately 2800 tonnes, with the global average market price at around USD 20/kg. The gross margin of major industry players was approximately 30%–50%. Ferrous aspartate is an organic iron nutritional compound formed by the combination of ferrous ions and aspartic acid, and is also known as iron(II) aspartate. Its core function is to supplement divalent iron, while using aspartic acid as an organic acid ligand to improve the stability, solubility, and bioavailability of iron. Compared with conventional iron sources such as ferrous sulfate, ferrous fumarate, and ferrous gluconate, ferrous aspartate generally features lower gastrointestinal irritation, better absorption and utilization, and stronger formulation compatibility. It is mainly used in food fortification, animal feed, pharmaceutical iron supplements, agricultural fertilizers, and certain cosmetic raw material applications. Overall, ferrous aspartate is an organic iron salt and amino acid iron product, representing a high-value-added functional iron nutrition ingredient.

This report studies the global Ferrous Aspartate production, demand, key manufacturers, and key regions.
