The global Ferrous Metal Recycling Equipment market size is expected to reach \$ 1201 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Ferrous Metal Recycling Equipment refers to machinery and systems designed to process, sort, and recover metals that contain iron, such as steel and cast iron, from scrap materials and industrial waste. These machines typically include shredders, magnetic separators, crushers, and conveyors, which help transform scrap ferrous metals into reusable raw materials for steelmaking and other industrial applications. The equipment plays a crucial role in reducing environmental impact, lowering production costs, and improving resource efficiency. In 2025, global Ferrous Metal Recycling Equipment production reached approximately 286 k units, with an average global market price of around 2877 USD/unit. The production capacity for Ferrous Metal Recycling Equipment in 2025 was approximately 300 k units. The typical gross profit margin for Ferrous Metal Recycling Equipment between 20% and 40%.

The Ferrous Metal Recycling Equipment market encompasses the global demand and supply of machinery used for recycling iron-containing metals. Growth in this market is driven by increasing scrap steel availability, stringent environmental regulations, and rising demand for sustainable steel production. Key segments include shredding systems, magnetic separation systems, and material handling equipment, with end users spanning steel mills, metal processing facilities, and recycling centers. The market is expected to expand further due to technological advancements in automation, energy efficiency, and sorting accuracy.
