According to our (Global Info Research) latest study, the global Ferrule Threaded Joint market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The ferrule threaded joint is a commonly used pipe connection component, consisting of an externally threaded ferrule and a corresponding internally threaded pipe. By inserting the ferrule into the end of the pipe and rotating it, the threads of the ferrule and the threads of the end of the pipe engage with each other, thereby achieving tightening and sealing.

The main features of ferrule threaded joints are: simple and fast, reusable, good sealing performance, wide application range, and strong endurance. When selecting and using ferrule threaded joints, you need to pay attention to factors such as pipe material, working pressure, temperature range to ensure the quality and reliability of the joints.
