Abstracts

The global Ferrule Threaded Joint market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The main features of ferrule threaded joints are: simple and fast, reusable, good sealing performance, wide application range, and strong endurance. When selecting and using ferrule threaded joints, you need to pay attention to factors such as pipe material, working pressure, temperature range to ensure the quality and reliability of the joints.

The ferrule threaded joint is a commonly used pipe connection component, consisting of an externally threaded ferrule and a corresponding internally threaded pipe. By inserting the ferrule into the end of the pipe and rotating it, the threads of the ferrule and the threads of the end of the pipe engage with each other, thereby achieving tightening and sealing.
