Abstracts

Fertilizer and Pesticide belong to agrochemical products. The plants need nutrients to grow, which they consume from the soil through the plant's roots. And fertilizers provide the major nutrients, whether they are organic or inorganic. Unless the requirement of nutrients fills up, the soil productivity and growing capacity will decrease with every harvesting. Basically, there are many types of agricultural fertilizers, but here we are showing the two types of fertilizers that include every kind of mineral fertilizer and natural fertilizer also. Pesticide is a chemical-based substance to repel, control, and kill animal life or plant life, known as pests. They include a range of biological agents such as disinfectants, antimicrobials, bacteria, and viruses to control agricultural pests that can damage crops and livestock. While pests can involve fungi, rodents, slugs, insects, weeds, snails, bird mites, etc.
