## Abstracts

According to our (Global Info Research) latest study, the global Fertilizer Tester market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The fertilizer tester determines chemical and the physical composition of the fertilizers. In the physical composition test, the fertilizer tester determines the particle size and the moisture content which plays a pivotal role while testing fertilizers. And in the chemical composition test, the fertilizer tester determines various impurities that can harm the plant and amount of nutrients. The amount of nutrient content determines the efficiency of the fertilizer. Thus, the test is carried out for analyzing the quality of the fertilizer to meet the required standards.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
