According to our (Global Info Research) latest study, the global Fetal Bovine Serum (FBS) for Cell Culture market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Fetal Bovine Serum (FBS) is a widely-used growth supplement for cell culture media that provides many defined and undefined components that have been shown to satisfy specific metabolic requirements for the culture of cells.

Fetal bovine serum is the remained blood fraction after the natural coagulation of blood, which is obtained by centrifugation to remove any remaining red blood cells. Fetal bovine serum has been irreplaceable media in cell culture industry. The raw material of fetal bovine serum is fetal bovine blood. The FBS suppliers make contract with beef processor or agent and gather fetal bovine blood at certain time. The production of FBS is quite seasonal because the raw material source can only be acquired twice a year. The primary factor and main market-driver is the beef processing industry, since FBS is produced as a byproduct of this industry.

The manufacturers of FBS are concentrated in North America, Australia, New Zealand and South America. The growth of FBS production has been modest for the past years, due to the deficiency of raw material supply. The primary application of FBS is to fortify cell culture media. It is the most common media supplement used for cell culture.
