Fetal monitoring systems are the devices used to monitor the fetal heartbeat and the strength of the mother's uterine contractions during labor. Monitoring the fetal heartbeat and uterine contractions helps the professionals to observe the fetus health condition, blood flow and circulation, growth and development, and maternal health. The fetal monitoring systems are of two types, namely, portable and fixed systems. They include wall mounted ultrasound fetal monitoring system, handheld electronic fetal monitoring system, hand held ultrasound fetal monitoring systems, mobile application, which acts as a monitor along with the electrodes as a sensor, uterine contraction monitoring system, and telemetry.

Fetal monitoring systems consist of electronic fetal monitors, fetal ultrasound monitors, fetal dopplers, uterine contraction systems, and telemetry. Key vendors are focusing on developing fetal monitoring systems with remote and multi-parameter monitoring and are also concentrating on developing diagnostic methods such as ultrasound 4D and 5D. With the rising adoption of home care settings and home birth delivery procedures, countries including the UK, the US, and India will be the major adopters of portable fetal monitoring systems.
