Abstracts

Hot melt adhesive film is a kind of functional coating adhesive film material, which can evenly and smoothly coat the hot melt adhesive material that can be melted and bonded to the substrate surface to achieve specific performance. Hot melt adhesive film is widely used in automotive electronics, consumer electronics, photovoltaic and other industries. FFC (Flexible Flat Cable), namely Flexible flat cable, is a new type of data Cable, which is made of PET insulating material and extremely thin Flat copper wire, and is pressed together by automatic equipment production line. It is mainly used for internal signal transmission of various electronic devices. As a new type of data cable, FFC has the following characteristics: small volume, thin thickness; Process environmental protection; Simple connection and easy disassembly; Good bending resistance. Hot melt adhesive film for FFC is one of the key materials to ensure the signal transmission rate and stability of FFC.
