## Abstracts

The global FIB-SEM System market size is expected to reach \$ 839.2 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Global key players of FIB-SEM System include Thermo Fisher Scientific Hitachi and Zeiss, etc. The top three players hold a share over 85%. Japan is the largest market. In terms of product type, Ga Ion Source is the largest segment, occupied for a share of 95%, and in terms of application, Material Science has a share about 40 percent.

The FIB-SEM system is an electron microscope system that integrates focused electron beams and scanning ion beams. Focused ion beams can be used for micro processing of samples, scanning electron beams can be used for micro imaging and 'two-dimensional' characterization analysis of sample surface morphology, and real-time observation of the FIB processing process. Therefore, the FIB-SEM system can achieve fixed-point etching, deposition, cross-sectional cutting, TEM electron microscopy sample preparation, and micro/nano device preparation of samples Circuit repair, 3D structural characterization, etc.

This report studies the global FIB-SEM System production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for FIB-SEM System, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
