Fiber braided resin pipe is a high-strength hose made of resin material and reinforced by fiber braiding. It is often used for the transportation of liquids and gases, and is especially suitable for high pressure or corrosive environments. This type of pipe usually uses corrosion-resistant and high-temperature resistant resins (such as polyester resins or epoxy resins), and the braided structure of the outer fiber (such as glass fiber or aramid fiber) is used to enhance strength and impact resistance. Fiber braided resin hose is light, flexible, chemically resistant and wear-resistant. It is widely used in petrochemical, pharmaceutical, food processing and other fields to meet the requirements of long-term stable operation in complex environments.
