## Abstracts

According to our (Global Info Research) latest study, the global Fiber Optic Dissolved Oxygen Probe market size was valued at US\$ 55.56 million in 2025 and is forecast to a readjusted size of US\$ 123 million by 2032 with a CAGR of 12.2% during review period.

Fiber Optic Dissolved Oxygen Probes are water quality sensors based on the principle of optical fluorescence quenching. They transmit excitation light to a sensing membrane via optical fiber and collect the attenuation or phase change of the fluorescence signal caused by dissolved oxygen, thus achieving accurate measurement of dissolved oxygen concentration in water. These detectors do not consume oxygen, require no electrolyte or oxygen-permeable membrane, and feature fast response, low maintenance, and high long-term stability. They are suitable for applications requiring continuous and reliable dissolved oxygen data, such as water environment monitoring, water treatment process control, aquaculture, and scientific research. Sales in 2025 reached 156,000 units, with an average price of \$305 per unit. Total production capacity was 200,000 units, with a gross profit margin of 42%.
