## Abstracts

The global Fiber Optic Stripping Plier market size is expected to reach \$ 141 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032). In 2024, the global annual production capacity of fiber optic stripping pliers reached approximately 7.83 million units, while actual output was around 5.28 million units. The global average market price was about US\$18 per unit, with major manufacturers achieving gross profit margins between 20% and 35%. Annual production capacity varied from 3.5 million to 8 million units. A Fiber Optic Stripping Plier is a precision hand tool designed to remove protective coatings from optical fibers without damaging the glass core. It is widely used in fiber splicing, connector assembly, cable preparation, and field maintenance.

Upstream includes carbon steel, alloy steel, precision molds, rubberized grips, and cutting blades. Midstream manufacturers focus on blade precision machining, ergonomic handle design, and assembling stripping mechanisms. Downstream applications cover telecom installation teams, FTTH contractors, data center maintenance, industrial fiber system integrators, and lab fiber processing.

The market for fiber optic stripping pliers continues to grow steadily along with global fiber deployment and FTTH expansion. As network contractors aim to improve efficiency in field operations, demand for high-precision, durable, and ergonomic stripping tools is increasing. Manufacturers are focusing on multi-hole designs, improved blade accuracy, and better grip comfort. Emerging markets, especially Southeast Asia, Africa, and South America, are contributing new demand due to rapid broadband construction. With the expansion of 5G infrastructure and data centers, requirements for consistent stripping quality and compatibility with various fiber coatings will further support market growth.
