A Fiber Optic Terminal Distribution Box is a passive optical connectivity enclosure used to terminate, splice, distribute and protect optical fibers in fiber access networks. It integrates splice trays, adapters, splitters and cable management components to provide reliable fiber connections for FTTH, FTTB and other broadband deployment scenarios. The product is designed for indoor or outdoor installation and serves as a terminal connection point within optical access infrastructure. It excludes optical splitters, optical cables and active communication equipment.

The upstream industry includes engineering plastics, sheet metal, optical adapters, splice trays, connectors, sealing materials and cable accessories. Midstream consists of enclosure manufacturing, component assembly, testing and quality inspection. Downstream applications include FTTH deployment, broadband access networks, telecommunications infrastructure, data centers, smart buildings and industrial communication networks. Market demand is supported by global fiber network expansion and broadband infrastructure upgrades.
