The global Fiber-reinforced Plastic (FRP) Recycling market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Fiber-reinforced Plastic (FRP) Recycling refers to the process of recovering and reusing materials from composite materials such as FRP. Composite materials are structures composed of fibers and polymer matrices that have excellent mechanical properties and corrosion resistance. Composite materials are widely used in automobiles, construction, sports and other industries, but they also produce a large amount of waste. If not processed, it will cause pollution and waste to the environment.
