The global Fiber Splitting and Rewinding Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A fiber splitting and rewinding machine is a piece of equipment used in optical fiber manufacturing. It is used to split and rewind optical fibers. In the optical fiber manufacturing process, the optical fiber needs to go through processes such as drawing and coating, and then splitting and rewinding. The fiber splitting and rewinding machine can split the optical fiber into multiple filaments and rewind these filaments into an optical fiber for subsequent processing and use. This kind of machine plays an important role in the optical fiber manufacturing industry and can improve the production efficiency and quality of optical fibers.
