Fiber turntables are often referred to as 'fiber turntable filters' or 'fiber filters' in sewage treatment. It is a common mechanical filtration equipment used to remove suspended solids and solid particles in sewage. The working principle of the fiber turntable filter is to distribute the sewage evenly on the turntable through the rotating fiber turntable, and intercept the solid particles on the fiber with the help of centrifugal force. At the same time, the filtered water is separated through appropriate drainage devices, so as to realize the treatment and purification of sewage.
