According to our (Global Info Research) latest study, the global Fiberglass Antenna market size was valued at US\$ 847 million in 2024 and is forecast to a readjusted size of USD 1218 million by 2031 with a CAGR of 5.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Fiberglass antenna is an antenna that uses glass fiber reinforced composite materials as its shell or support structure. It has the characteristics of lightweight, high strength, corrosion resistance and anti-aging. It usually integrates metal radiation units (such as vibrators or microstrip arrays) inside and is suitable for communication, radar, satellite navigation and other fields. The insulation and low dielectric loss of glass fiber can optimize the signal transmission efficiency. At the same time, its strong plasticity makes it easy to design complex shapes (such as vehicle-mounted, ship-mounted or base station antennas) and adapt to harsh environments (high humidity, salt spray, ultraviolet rays, etc.).
