According to our (Global Info Research) latest study, the global Fiberglass Cutting Robots market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The cutting operation of fiberglass creates critical health issues for workers due to the release of injurious fiber dust in the air during the cutting process. Thus, incorporation of robots in fiberglass cutting process reduces the health risk for workers. Similarly, fiberglass cutting robots are replacing CNC machines at a faster pace due to high precision cutting technology. Dedicated fiberglass cutting robots are implemented in the industrial sector to perform the cutting task under hazardous environments. Multiple spindles are incorporated in fiberglass cutting robots to change the media or tools so that the robot can be used for multiple applications within a single work environment.

The 6-axis and 7-axis segment accounted for the major shares of the fiberglass cutting robots market. Factors such as the increased utilization in the industrial sector and high flexibility of these robots will contribute to the growth of this industry segment in the coming years.
