According to our (Global Info Research) latest study, the global Fiberglass Electrical and Electronic Products market size was valued at USD 2071.8 million in 2023 and is forecast to a readjusted size of USD 2929.3 million by 2030 with a CAGR of 5.1% during review period.

Fiberglass is a type of reinforced plastic in which the material used for reinforcement is glass fiber. Glass fibers can be of two types based on their geometry, continuous fibers, which are used in yarns and textiles, and the discontinuous (short) fibers, which are used as batts, blankets, and boards for insulation and filtration. Fiberglass is formed into yarn and is also woven into fabrics. Fiberglass is personalized for certain uses such as type E (electrical), which is used as electrical insulation tapes, textiles, and reinforcements; type C (chemical), which offers superior acid resistance, and type T (thermal), which is used for thermal insulation.

The PCBs dominated the application segment of the fiberglass electrical and electronic products market and is expected to continue the dominion over the next few years as well. The wide range of application areas and the increasing usage of electronics, drive the growth of this market segment.
