In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The main material of the FRP electroplating tank is FRP, which combines the strength of glass fiber and the corrosion resistance of resin, so that the tank can withstand various chemical corrosion and mechanical stresses during the electroplating process. The FRP electroplating tank is mainly used in the electroplating process as a container for the electroplating solution. It is suitable for a variety of electroplating operations such as zinc plating, copper plating, nickel plating, gold plating, etc., and can meet the needs of different electroplating processes.

The FRP electroplating tank is generally designed in a rectangular shape with appropriate width and depth to meet the needs of electroplating operations. The size and shape of the tank can be customized according to the requirements of the actual electroplating process. In addition, the FRP electroplating tank is also equipped with auxiliary equipment such as conductive devices and heating devices to ensure the smooth progress of the electroplating process.
