Abstracts

The global Fiberglass Insulation Panels market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

As an exterior material for smart terminal products, fiberglass boards have many advantages. It has low density, high strength, is not easily deformed, has good anti-fall properties, and does not require the use of a protective shell. At the same time, glass fiber and its fabrics are commonly used materials and have the characteristics of low cost. In the shell design of smart devices, glass fiber can provide advantages such as lightness, thinness, rigidity, easy shaping, and low dielectric constant, which allows it to achieve lighter and thinner designs compared with composite materials and glass covers.
