According to our (Global Info Research) latest study, the global Fiberglass Needle Mats market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Fiberglass Needle Mat is formed by combing short glass fibers and using the mechanical action of needles to entangle the fibers with each other, without adding adhesives. In this process, the fibers and the reinforced glass fiber base cloth are intertwined, which enhances the overall structure of the felt layer and forms a stable three-dimensional microporous structure. It is a high-speed, high-efficiency high-temperature filter material. Compared with other high-temperature resistant fiber felts, it has special advantages such as low price and high high-temperature resistance, but its running resistance is higher than that of general chemical fiber high-temperature filter materials.

This report is a detailed and comprehensive analysis for global Fiberglass Needle Mats market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
