In the case of LFT (Long Fiber Thermoplastics) the individual strands of the direct roving are impregnated very quickly and with high wet-out requirements in a pultrusion process. After cooling the impregnated strands are cut to a specified length into pellets. Direct roving can also be used in D-LFT (Direct Long Fiber Thermoplastics), where the strands are fed directly into the polymer melt without a prior compounding step. Similarly, direct roving is also suitable for fiber reinforced tapes.
