Abstracts

The global Fiberglass Single-end Roving market size is expected to reach \$ 8933 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Fiberglass single-end roving, also known as fiberglass direct roving, is an untwisted continuous glass fiber roving produced by drawing filaments directly from bushings, gathering them into a parallel strand, applying a sizing system and winding them onto packages. It is a core reinforcement material for composite manufacturing. Key upstream materials include silica sand, pyrophyllite, limestone, boron minerals, soda ash, kaolin, alumina and sizing systems compatible with thermoset or thermoplastic resins, such as silane-, epoxy- and polyurethane-based formulations. It is mainly used in pultrusion, filament winding, weaving, knitting, LFT/GMT, thermoplastic composites and preregs. Downstream applications include wind blades, automotive lightweight components, pipes, tanks, pressure vessels, construction profiles, cable strength members, marine, aerospace and sports equipment.

In 2025, global fiberglass single-end roving production reached approximately 6.8 million tons, with an average global market price is \$900 per ton.

From a global industry perspective, fiberglass single-end roving is an important base reinforcement for continuous-fiber-reinforced composites. Compared with assembled roving, single-end roving generally has only one full continuous strand end, offering more stable unwinding tension, lower fuzz, better fiber-orientation consistency and stronger continuous-feeding performance. This makes it particularly suitable for processes requiring fiber continuity, uniform tension and efficient resin impregnation. 3B Fibreglass describes direct roving as continuous filaments bonded into a single strand

and wound onto a bobbin, suitable for filament winding, pultrusion, knitting and weaving, texturisation and long-fiber technologies. Therefore, the value of fiberglass single-end roving is not limited to fiberglass strength; it directly affects unwinding stability, resin wet-out quality, fiber distribution, laminate strength, surface appearance and batch-to-batch production consistency.

In terms of industry trends, fiberglass single-end roving is moving toward higher strength, more stable tex, lower fuzz, fewer breaks, faster wet-out, lower static, uniform unwinding, resin-specific sizing and stronger compatibility with automated forming. Traditional direct rovings focused mainly on linear density, tensile strength and price, while downstream users increasingly evaluate sizing formulation, unwinding tension, filament-damage control, resin penetration speed, package formation, low static and batch stability. Johns Manville notes that direct roving for structural thermoplastics provides easy unwinding due to even tension, low fuzz generation and excellent wettability, and can be used in weaving, pultrusion and filament winding; for LFT, direct roving strands must be rapidly impregnated before cooling and cutting into long-fiber thermoplastic pellets.

The main growth drivers come from three areas. First, pultruded profiles, composite rebar, cable trays, gratings, FRP pipes, storage tanks, pressure vessels, marine parts, wind components and construction materials continue to require high-strength, corrosion-resistant and continuously processable fiberglass reinforcement. Second, demand for high-performance composites in automotive lightweighting, electrical and electronics, rail transit, wind power, infrastructure, oil and gas pipelines and industrial equipment is pushing single-end roving from general-purpose grades toward thermoset-specific, thermoplastic-specific, winding-specific, pultrusion-specific and weaving-specific products. Third, downstream composite manufacturers increasingly focus on automation efficiency, resin wet-out speed, mechanical performance, surface quality and long-term reliability, turning fiberglass single-end roving from ordinary fiberglass roving into a critical intermediate material affecting composite strength, processing efficiency and large-scale manufacturing stability.

This report studies the global Fiberglass Single-end Roving production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Fiberglass Single-end Roving and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Fiberglass Single-end Roving that

contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Fiberglass Single-end Roving total production and demand, 2021-2032, (Kilotons)

Global Fiberglass Single-end Roving total production value, 2021-2032, (USD Million)

Global Fiberglass Single-end Roving production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons), (based on production site)

Global Fiberglass Single-end Roving consumption by region & country, CAGR, 2021-2032 & (Kilotons)

U.S. VS China: Fiberglass Single-end Roving domestic production, consumption, key domestic manufacturers and share

Global Fiberglass Single-end Roving production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Kilotons)

Global Fiberglass Single-end Roving production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons)

Global Fiberglass Single-end Roving production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons)

This report profiles key players in the global Fiberglass Single-end Roving market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include China Jushi, Praana Group (Owens Corning), Saint-Gobain Vetrotex, Nippon Electric Glass, Taishan Fiberglass, CPIC, AGY Holding Corp., Valmiera Glass Group, Johns Manville, Taiwan Glass Group, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Fiberglass Single-end Roving market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Kilotons) and average price (US\$/Ton) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered:

1. How big is the global Fiberglass Single-end Roving market?
2. What is the demand of the global Fiberglass Single-end Roving market?
3. What is the year over year growth of the global Fiberglass Single-end Roving market?
4. What is the production and production value of the global Fiberglass Single-end Roving market?
5. Who are the key producers in the global Fiberglass Single-end Roving market?
6. What are the growth factors driving the market demand?
