A fibre jointing sheet is a specialized gasket material made from a blend of fibers, fillers, and binders, designed to provide sealing solutions in various industrial applications. These sheets are often composed of synthetic, organic, or mineral fibers that are bonded together using elastomers like nitrile rubber, which enhances their durability and sealing properties. Fibre jointing sheets are primarily used in industries such as automotive, chemical processing, oil and gas, and power generation, where they serve as sealing components between surfaces to prevent leaks of gases, fluids, or chemicals under high pressure or extreme temperatures. They offer excellent resistance to heat, oil, chemicals, and abrasion, making them suitable for use in harsh environments like engines, pipelines, and machinery. Depending on the specific type of fibre and binder used, these sheets can be tailored to meet specific performance requirements, such as high thermal stability, chemical compatibility, or compressive strength. Fibre jointing sheets are commonly cut into gaskets or seals and are preferred for their ability to conform to irregular surfaces, providing an effective seal that prevents leakage and enhances equipment efficiency and longevity. Their versatility, reliability, and cost-effectiveness make them essential in many industrial sealing applications.
